FOR IMMEDIATE RELEASE

Custom Systems Becomes a Microsoft Authorized Education Reseller
Custom Systems earns distinction through commitment to academic customers.

Sparta, NJ – December 6, 2013 – Custom Systems Corporation today announced it has become a Microsoft Authorized Education Reseller (AER), demonstrating its ability to meet Microsoft academic customers' evolving needs in today's dynamic academic environment. To earn a Microsoft AER authorization, partners must complete a test to prove their level of academic licensing and market expertise.

The Microsoft AER Program is designed to authorize and equip organizations that deliver academic products and services through the Microsoft platform with the training, resources, and support they need to provide their customers with superior experiences and outcomes.

Custom Systems Corporation is a leading provider of innovative technology solutions that enable academic clients to meet organizational goals while reducing IT expenses. By strategically focusing on solutions aligned with a client's specific challenge, their experience and expertise assists these schools in addressing those needs, while maximizing the return on IT investments.

"This Microsoft AER authorization shows our commitment and dedication to the specific needs of the academic IT marketplace by demonstrating our team's knowledge of Microsoft and

its academic products," said Paul Cook, Vice President, Network Services. "As technology advisors for their IT requirements, our goal is to provide the highest quality products and services and ensure the continued growth and success of our academic clients."

"By becoming AERs, partners show themselves to be committed and trained in providing discounted Microsoft academic products to the education market," said Anthony Salcito, vice president of Education for Microsoft Corp.'s Worldwide Public Sector. "This authorization, along with our other education partner initiatives, gives our partners recognition of their areas of expertise and our academic customers the confidence that they are buying from academic IT specialists."

Providing value through comprehensive IT services and consulting, Custom Systems leads the way to better business practices and increased productivity within mainstream organizations since 1969. For more information visit our website at www.CustomSystemsCorp.com or call us at 973.726.0202.
